Inserting the Batteries

Procedure

Your remote control requires two AA alkaline batteries.

**CAUTION:**

Make sure you correctly align the positive (+) and negative (-) terminals on the batteries to the corresponding terminals in the remote control.

1. Press forward then lift up on the lever on the back cover of the remote control. The battery cover releases, and you can pull the cover up to remove it.

2. Remove and safely dispose of the old batteries.

3. Insert and firmly seat two new AA batteries (alkaline required) into the battery compartment.

4. Slide the front of the battery cover back onto the remote control and snap it into place.

5. Confirm by pointing the remote control toward the TV and test the POWER, VOLUME, and MUTE functions. Note: If you programmed the remote control to adjust the volume on your DHCT rather than the volume on the TV, test only the POWER function. If these functions do not operate from the remote control, enter the next TV setup code from the list and repeat this procedure from step 1.

Programming for VCR Operation
The remote control for the DHCT controls the VCR power, tape play, record, fast forward, rewind, stop, and TV/VCR functions. You can program the DHCT remote control to play video tapes. If you want the DHCT to manage recording events of your VCR, you must use the VCR Commander™ module. (See the VCR Commander® User’s Guide for more information or ask your service provider.) Without this module, you must manually set up your VCR to record programs.

Make sure the power to your TV is turned on before you program the remote control. Use the following procedure to program the ER1 Remote Control to display the DHCT remote control setup code in the table below. If your TV brand is not listed, see Searching the Code Library.

2. Point the remote control away from the DHCT, TV, and VCR.

3. On your remote control, press and hold the TV key and the SELECT key at the same time, until the LED on the remote blinks twice.

4. On your remote control, press and hold the VCR key and the SELECT key at the same time, until the LED on the remote blinks twice.

5. Using the remote control keypad, enter your TV’s 3-digit setup code. The LED on the remote control should blink twice. If not, try another setup code, if available.

6. Confirm by pointing the remote control toward the VCR and test the POWER, PLAY, and STOP functions. If these functions do not operate from the remote control, enter the next VCR setup code in the list and repeat this procedure from step 1.

Searching the Code Library
If none of the listed TV or VCR codes work, you can enter a code that searches the library of codes. The remote control automatically selects the proper code for your TV or VCR. Make sure the power to your TV or VCR is turned on before you program the remote control.

1. Point the remote control away from your TV or VCR, depending on which device you are programming.

2. Do one of the following:
   - To search for TV codes, press and hold the TV key and the SELECT key at the same time, until the LED on the remote blinks twice.
   - To search for VCR codes, press and hold the VCR key and the SELECT key at the same time, until the LED on the remote blinks twice.

   Note: The LED on the remote control also blinks twice when it reaches the end of its search library.

3. Using the remote control keypad, enter 991. The LED on the remote blinks twice.

4. Point the remote control toward your TV or VCR, and press the TV key or the VCR key depending on which device you are programming.

5. Did the TV or VCR turn off?
   - Yes, go step 6.
   - No, repeat step 4.

6. Press the SELECT key to confirm a valid code. The remote control LED blinks twice.

7. Point the remote toward the device you programmed and press Power to confirm that the device turns on and off.
